

Table S2. Predictor estimates with standard errors and significance information for a logistic mixed-effects model predicting word learning in Experiment 2.

Predictor	Estimate	Std. Error	<i>z</i> value	<i>p</i> value	
Intercept	3.97	0.27	14.88	<.001	***
Log(Referents)	-0.47	0.10	-4.76	<.001	***
Log(Interval)	-0.60	0.07	-8.39	<.001	***
New Label Trial	-4.02	0.30	-13.31	<.001	***
Log(Referents)*New Label Trial	-0.24	0.12	-2.00	.04	*
Log(Interval)*New Label Trial	0.58	0.08	6.99	<.001	***

The model was specified as $\text{Correct} \sim \text{Log(Referents)} * \text{TrialType} + \text{Log(Interval)} * \text{TrialType} + (\text{TrialType} \mid \text{subject})$
